GLOBAL DAY OF PROTEST AGAINST 5G, 25th JANUARY, 2020
Over 150 Confirmed Events Planned in 31 Countries So Far

INTERNATIONAL APPEAL WILL BE DELIVERED TO GOVERNMENTS AROUND THE WORLD
Signed by Scientists and Doctors from 203 Countries and Territories

THE ISSUE: MICROWAVING OUR PLANET

Ireland will host a peaceful protest co-organised by a number of concerned citizens at 1pm ST STEPHENS GREEN MAIN GATE, DUBLIN.

5G, currently being deployed in Ireland and all over the world, is the latest generation of mobile phones and broadband, which will enable the Internet of things whereas every device will be connected to each other, posing health, privacy and security issues to our citizens. There is already significant opposition to 5G in Ireland, with 74 STOP 5G groups and pages on Facebook, and 9 motions having been passed by 8 different counties (with 4 more planned) to stop the deployment of 5G networks until proven safe by independent research: Cork, Clare, Leitrim, Sligo, Wicklow, Roscommon, Kerry, Laois.

While the media’s attention with regard to environmental issues has been captured by climate change, fracking, and plastics in the ocean, an International Appeal to Stop 5G on Earth and in Space (The Appeal — 5G Space Appeal) has been quietly making its way around the world. Signed by 4,800 scientists, 2,800 medical doctors, 770 beekeepers, 2,000 environmental organizations, and 191,844 others from 203 countries and territories, this Appeal calls on the world’s governments to stop the deployment of 5G.

On January 25th, 2020, environmental groups all around the world are planning over 150 events in 31 countries so far, with more being added daily. Their goal is to stop the deployment of millions of 5G antennas on Earth and 50,000 5G satellites in space, and to secure meetings with officials in governments and international governmental organizations including the European Union, the United Nations, and the World Health Organization.

The issue is microwave radiation, which has been steadily intensifying for over two decades courtesy of the wireless revolution. 5G will bring a huge increase in radiation, virtually overnight, everywhere—in cities, suburbs, parks, nature preserves, wildlife refuges, oceans, Greenland, and Antarctica. Instead of mobile phone masts every few miles, there will be small cell antennae — small but powerful—in front of every third to fifth home. Instead of 2,000 satellites orbiting the Earth, there will shortly be 50,000.

There are over 10,000 published independent studies proving the biological harm caused by current lower levels of RF radiation, including over 3,700 peer-reviewed studies. As a result of this, in particular the 2018 Ramazzini Institute study and the 2018 National Toxicology Program study, both of which found “clear evidence” of the link between wireless radiation and cancer, scientists worldwide are calling on the IARC to reclassify RF radiation correctly as a Class 1 carcinogen.

The organizers of the events of 25th January, 2020 include people who have already been so severely injured by wireless devices that they can no longer participate in society at all. They are fighting for their own lives, the lives of their children, and the lives of the insects, birds, animals, and all of us.
